## ABOUT COMPANY

**21 000**

square meters

KIEVGUMA LLC has a leading position in the Ukrainian market of rubber products. The company has its own production facilities and warehouses with a total area of more than 21 000 square meters and is located on 3 hectares of land.

The company produces about 4 000 rubber, latex, silicone, PVC and TPE items for all branches of industry and national economy.

**4 000**

items

**3 000**

tons products  
per year

The production facilities allow to produce up to 1 000 tons of profiles and more than 2 000 tons of molded products per year. Molded products are produced using molds by the method of direct pressing or by casting the material into a mold.

We use more than 40 different presses: compression, vacuum, casting. The production section of our enterprise independently manufactures molds and dies of any complexity and configuration according to the customer's technical requirements.

**40**

presses

**30**

new products  
per month

We use more than 40 different presses: compression, vacuum, casting. The production section of our enterprise independently manufactures molds and dies of any complexity and configuration according to the customer's technical parameters.

The products of KIEVGUMA LLC meet all the requirements of European standards **ISO 9001** and **ISO 13485**, which is confirmed by international certificates of the quality management system of TÜV Austria, TÜV Rheinland.

## SPECIFICATIONS

According to DSTU 2805-94 depending on the purpose there are three types of rail plates:

bearing plate (PR)

standard plate (PN)

railroad switch pad (PS)

### BEARING PLATES (PR)

**Bearing plates (PR)** are used for reinforced concrete (RC) and wooden (W) sleepers to increase the longitudinal stability of the rails as well as to reduce the dynamic loads exerted on the express tracks. **These products are available in the following types:** for reinforced concrete sleepers: **PRB-1, PRB-2, PRB-4** for wooden sleepers: **PRD-2**

Sleeper type: **reinforced concrete (RC), wooden (W)**

### STANDARD PLATES (PN)

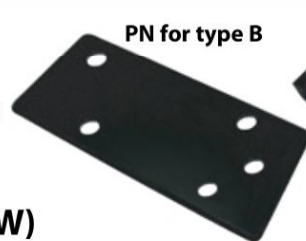

**Standard plates (PN)** are used for electrical insulation and shock absorbing of the track.

These products are available in the following types:

for reinforced concrete sleepers: **PNB-3, PNB-4**

for wooden sleepers: **PND-5**

Sleeper type: **reinforced concrete (RC), wooden (W)**

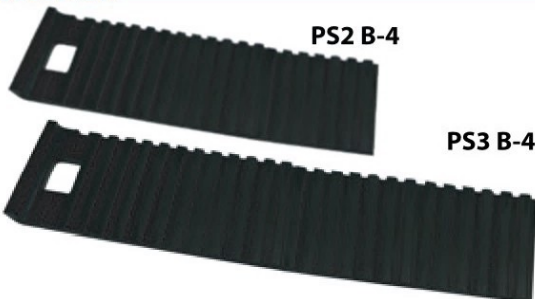

PN for type B

PN for type D

### RAILROAD SWITCH PADS (PS)

PS2 B-4

PS3 B-4

**Railroad switch pads (PS)** are used for electrical insulation and shock absorbing of the track.

These products are available in the following types:

For side track: **PS1 B**

For direct track: **PS2 B, PS3 B**

Sleeper type: **reinforced concrete (RC)**
